Corporate Structure

| | |
|---|------------------------|
| ASX Codes | ARU : ARUO |
| Shares on Issue | 121.3 m |
| Listed Options | 14.2 m @ 13c, June '08 |
| Share Price (11 June 2007) | A\$1.55 |
| Market Capitalisation (fully diluted) | ~A\$215 m |
| Cash on hand | A\$5.0 m |
| Australian Government Grant for feasibility | A\$3.3 m |

Arafura

Resources for the future

Strategy

Develop long life projects with high returns

Expanding our Northern Territory Focused Exploration

The NT is substantially under explored with excellent infrastructure

Some areas are unexplored and are the most prospective in the world

The NT hosts world class mining operations (U, Zn, Pb, Al, Mn, and Au)

Operations Strategy

Short Term Revenue (<2 years)

Gold resources, iron royalties

Medium Term Targets (2010)

Feasibility and development of Nolans rare earths – phosphate - uranium

Annual revenue of +\$US400m per annum

Assessing other opportunities for long life potential

Arafura

Resources for the future

Nolans Rare Earths Project

Multi commodity deposit with +US\$400Mpa revenue

| | |
|-------------|---------------------------------|
| Co-products | Rare Earths and Phosphoric Acid |
| By-Products | Uranium and Calcium Chloride |

High probability to increase the resource base

Open along strike and at depth

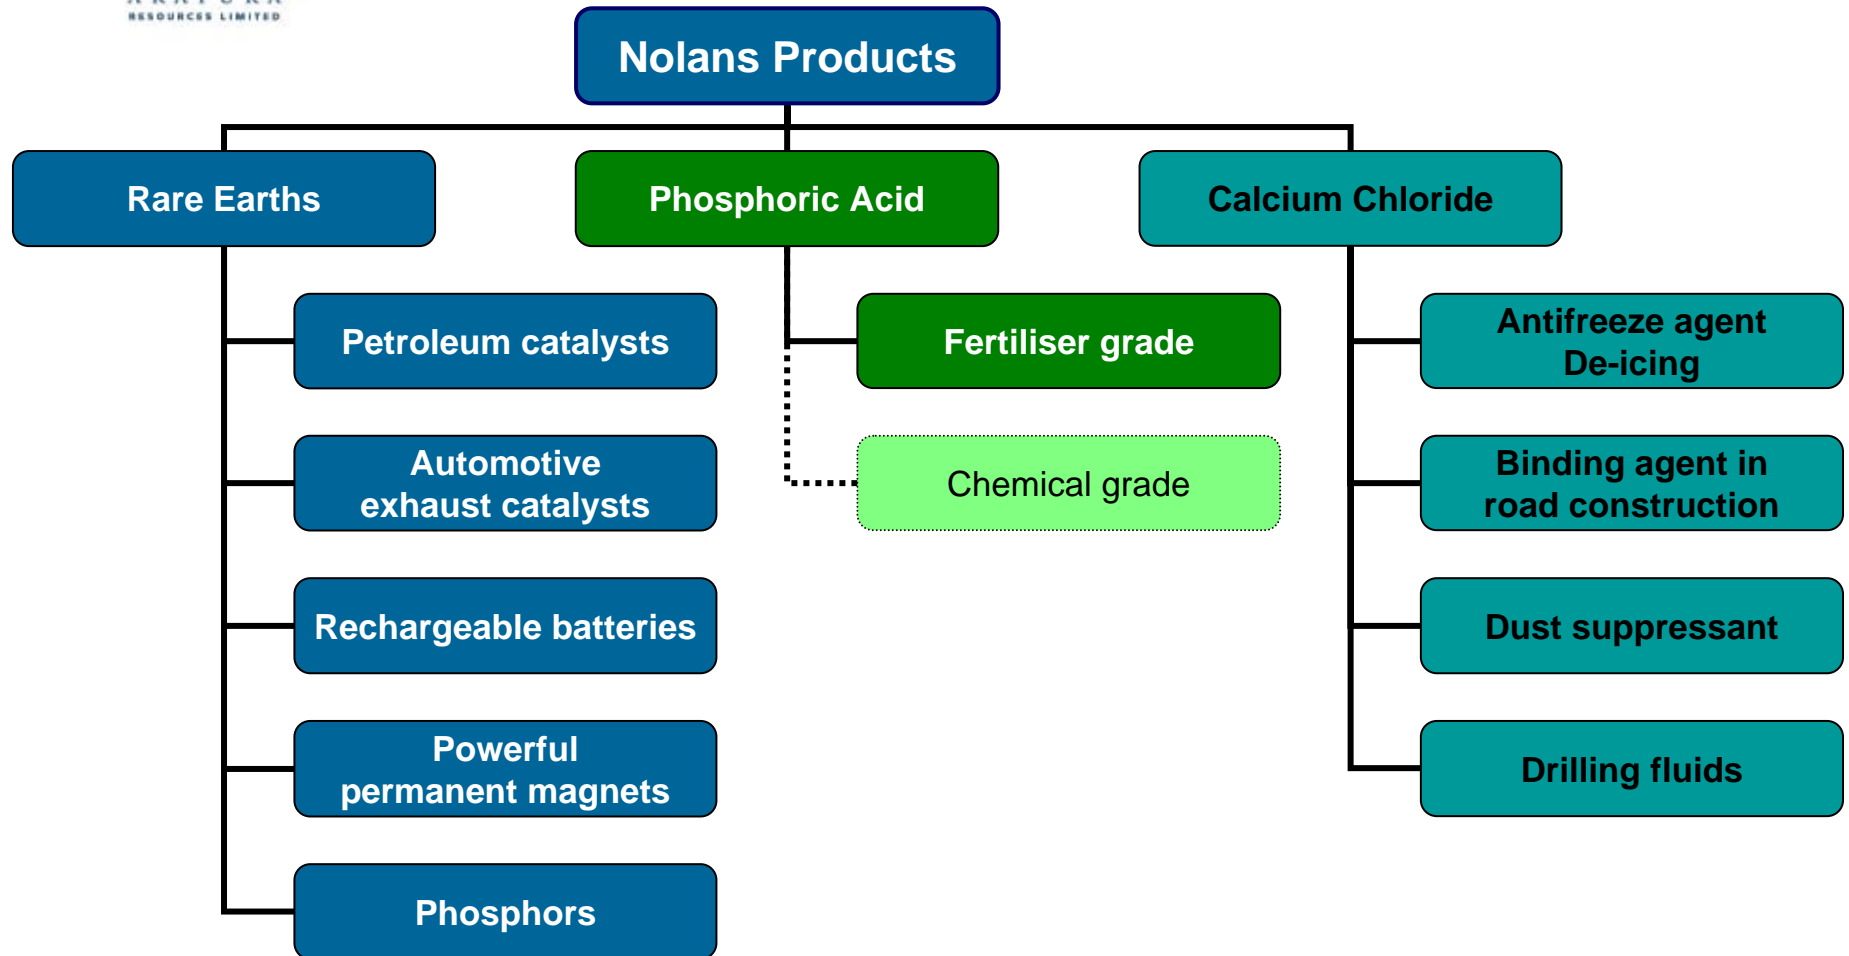

Indicated & Inferred Resources – 18.6 Mt

| Rare Earths | Phosphate | Uranium |
|---------------|--------------------------------------|---|
| 3.1% REO | 14% P ₂ O ₅ | 0.47 lb/t U ₃ O ₈ |
| 577,000 t REO | 2.6 Mt P ₂ O ₅ | 8.7M lbs U ₃ O ₈ |

Rare Earths

Powering Technology

Nolans Products

Rare Earths

Powering Technology

Rare earths - outcomes

Environmental leadership

- Reduce fuel consumption
- Reduce greenhouse emissions
- Vehicle exhaust emission control

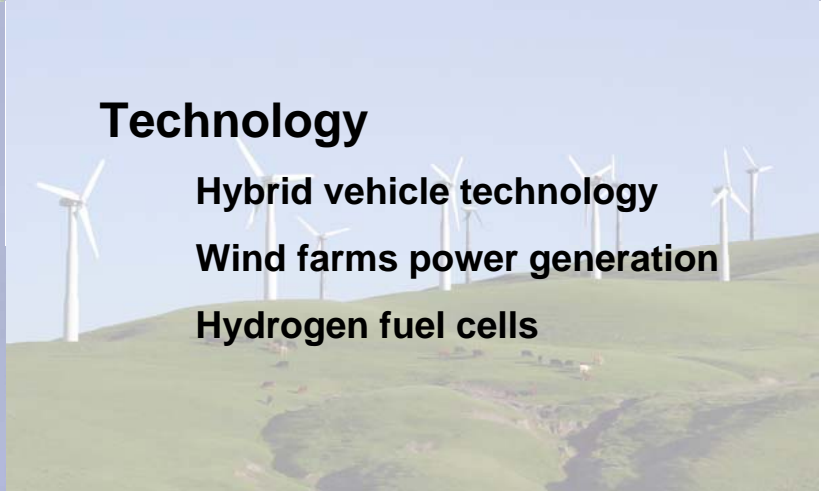

Electronics

- LCD/plasma screens
- Computer hard drives
- Medical services

Energy

- Petroleum refining
- Rechargeable batteries
- Energy efficient lights

Technology

- Hybrid vehicle technology
- Wind farms power generation
- Hydrogen fuel cells

Rare Earths - Supply & Demand

Demand “Driven by electronics and environmental products”

- Growing on average by 10% per annum
- Forecasted shortfall of +50,000 t by 2010
- Hybrid cars and electronics are the main driver

Supply “China’s raw materials are for China’s Development”

- Mining quotas restrict supply – no foreign ownership granted
- >95% of supply is controlled by Chinese Government
- Export quotas are ~40ktpa when non-Chinese demand about 60ktpa
- Export tariffs at 15% & VAT tax at 17%
- Environmental “non-compliance” further reducing supply

Rare Earths - Prices

Prices increasing strongly

Price increases in last 12 months

| | |
|--------------------------|-------|
| Lanthanum | +15% |
| Neodymium & Praseodymium | +150% |
| Dysprosium | +50% |
| Europium | +10% |
| Terbium | +25% |

Prices are responding to strong demand in electronics & hybrid vehicles
Also responding to current supply constraints and a stressed market

Alternate suppliers are in strong demand

Rare Earths

Powering Technology

Rare Earths - uses

| Product (99% grade) | US\$ / tonne | Dominant Use | Substitute |
|---------------------------|------------------------|---|-------------------------|
| Cerium | \$1,400 | Automotive exhaust catalysis Polishing for electronics | PGM's (limited) None |
| Lanthanum | \$1,850 | NiMH batteries Fluid cracking catalyst | Lithium Ion None |
| Neodymium Praseodymium | \$35,000 | Powerful permanent magnets | None |
| Dysprosium | \$95,000 | Improves magnet performance at temperature | None |
| Europium Terbium | \$375,000 \$650,000 | Phosphors | None |

Source: Metal Pages (includes the 15% export tariff on rare earths exports)

Rare Earths

Powering Technology

Other Products

| | Phosphoric Acid¹ | Calcium Chloride² |
|-------------------------------|------------------------------------|-------------------------------------|
| ARU production targets | 150,000 tpa | 500,000 tpa |
| World demand (2006) | 34 Mtpa | 2.7 Mtpa |
| Typical Price: \$/tonne | US\$400 (FOB) | US\$250 (CIF) |
| World Production utilisation: | 80% | 93% |
| Australia imports | +300,000 tpa | 50,000 tpa |
| Growth in Demand | 2-4% pa | 4-5% pa |
| Value to ARU as (FOB) | US\$60 Mpa | US\$50 Mpa |

Source: 1:British Sulphur Consultants

2.Arafura Company literature

Arafura's base case production targets are 10,000 tpa REO, 75,000 tonnes phosphoric acid and 250,000 tonnes of Calcium chloride.

The feasibility study will assess the commerciality of doubling of these rates to the targets indicated above.

Rare Earths

Powering Technology

Projected revenue of US\$410M pa

Multiple revenue streams significantly reduces commercial risk

Assumptions

Prices (FOB) : Rare earths at an average US\$12,000 per tonne, Phosphoric acid at US\$400 per tonne, Calcium Chloride at US\$100 per tonne.
Volume : 20,000 tonnes of rare earths, 150,000 tonnes of phosphoric acid and 500,000 tonnes of calcium chloride subject to feasibility validation
All in US Dollars

Rare Earths

Powering Technology

Engineering & Marketing Plan

2007 Finalise Flowsheet

- Q2 Finalise rare earth circuit flowsheet design
Phosphoric acid flowsheet is completed
- Q3 Configure rare earth pilot plant
- Q4 Operate phosphoric acid pilot plant

2008 Project Design & Finance

- Q1 Operate rare earths plant
- Q2 Product sample assessment
- Q3 Project financing
- Q4 Order long lead items to construction

2009 Construction

2010 Commissioning & Production

Arafura

Resources for the future

Development Plans

Development Plans – Nolans

| | |
|------|---|
| 2007 | Pre-feasibility study (July) and Pilot plant (starts October) |
| 2008 | Full feasibility - Detailed engineering design |
| 2009 | Construction |
| 2010 | Commissioning & Production |

Exploration Plans - 2007

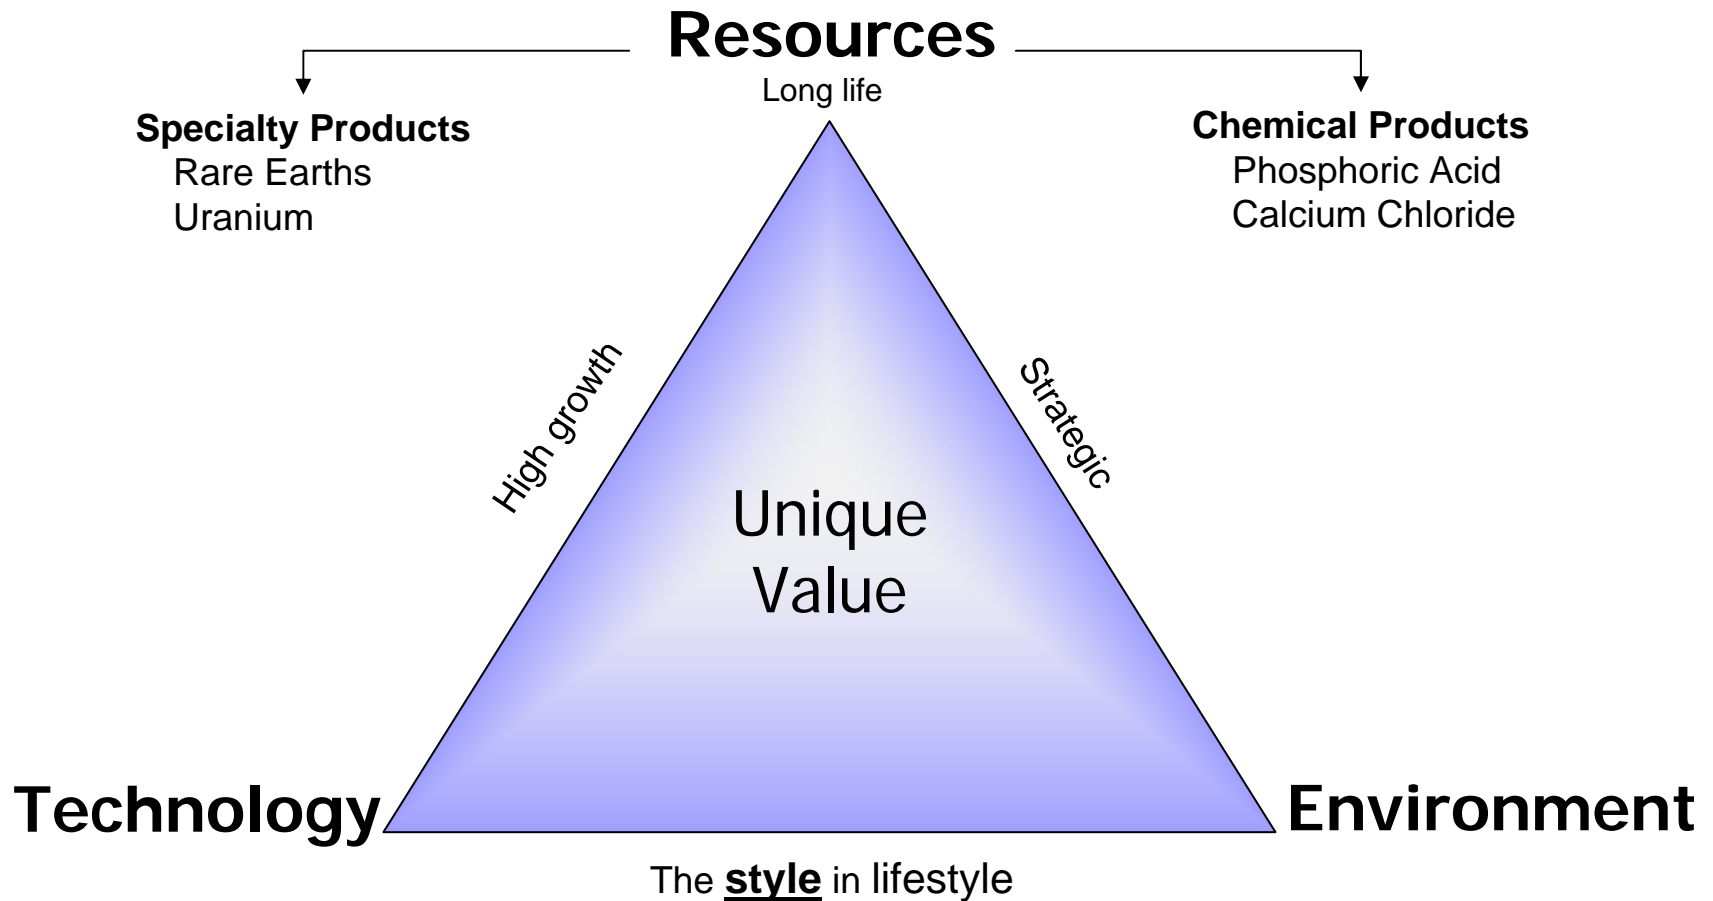

- Increase Nolans resources (to align with increased production rates)
- Follow-up drilling at Jervois vanadium project

Growth Plans

- Expand our exploration opportunities – strategic commodities
- Assess short term development opportunities

Arafura's Value Proposition

Arafura

Resources for the future
