

ASX/Media Release

78% Increase in South African Coal Inferred Resource

24 July 2008: Comdek Limited (ASX: CDS) has increased its estimated inferred resource by 78 per cent to 739 million tonnes. This increase, in line with the requirements of the Australian Code for Reporting of Mineral Resources and Ore Reserves (the JORC code), results mainly from the analysis of 12 additional boreholes in the Company's key South African Waterberg deposit, Koert Louw Zyn Pan.

"This is an important step forward in determining the enormous economic potential of our deposits in this emerging world class coalfield," said Mr. Paul Jury, Managing Director of Comdek.

"The next step will be to commence a comprehensive exploration program of all three deposits in this region. A program is currently being finalised to undertake the drilling of 98 exploration holes to complete a definition of the resource in the three areas."

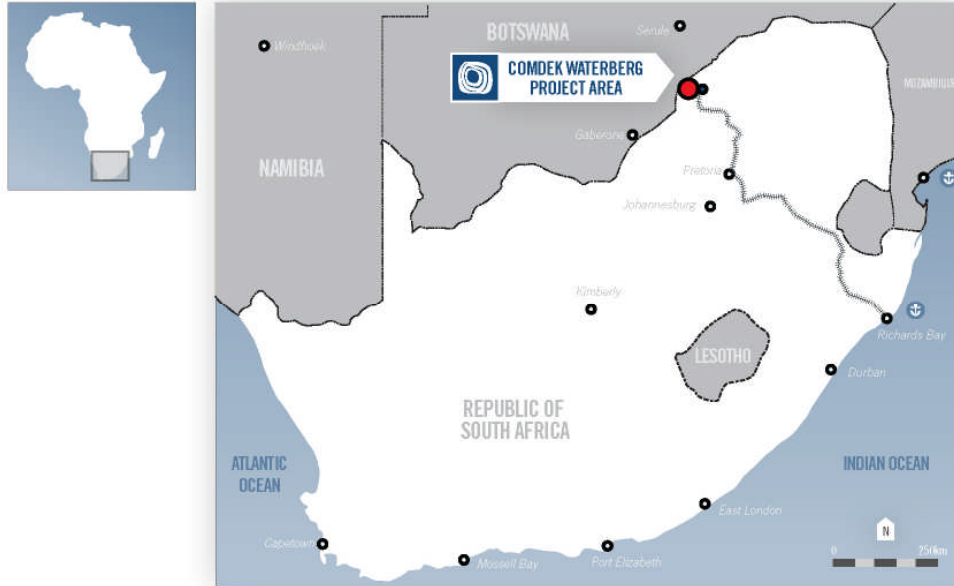

Details of the upgraded resource estimate are provided in the table below:

JORC Inferred Resource Estimate – Waterberg Tenements

Tenement	Mining Method	Previous Estimate (million tonnes)	Revised Estimate (million tonnes)
Zoetfontein	Open Cut	75.4	75.4
Lisbon	Open Cut	17.1	17.1
Koert Lou Zyn Pan	Open Cut	322.5	646.3
Total		415.0	738.8

The Waterberg Coalfield is located in the north western area of South Africa and continues across the border into Botswana. The coalfield strikes approximately 90 kilometres east-west and 40 kilometres north-south.

The three Comdek properties are on the border with Botswana and are serviced by good quality roads. The Lisbon and Zoetfontein properties are within 30km, and the Koert Louw Zyn Pan property is within 50km of the Grootegeluk opencast coal mine. Immediately adjacent to that mine is the rail head which leads to the Richards Bay Coal Terminal, the largest South African coal export port. Also adjacent to the mine are the operating Matimba and the under-construction Medupi coal fired power stations.
