

## Market Update - Mining

The Directors of Clean TeQ Holdings Limited (**ASX: CLQ**) wish to provide an update in relation to the current activities of the Company's Mining Division. This Division has recently experienced an increase in the level of enquiries for its services. The Mining Division is currently undertaking the following engagements to:

- Provide a detailed design for a pilot plant incorporating our Clean-iX® technology for a major gold miner in North America;
- Act as technical specialists in relation to extraction and purification processes for a significant uranium and base metals project in South Africa; and
- Provide a Definitive Feasibility Study for a major West Australian uranium project.

Furthermore, we have completed our pilot plant trials at the Langer Heinrich uranium mine in Namibia which demonstrated the ability of Clean-iX® technology for processing uranium. The knowledge gained from the pilot plant trials is being used in each of the projects listed above to achieve a better outcome for our customers.

We have been notified that we are no longer required to proceed with any further work in relation to the Stage III expansion of the Langer Heinrich uranium mine in Namibia. The Company remains committed to working with the Langer Heinrich uranium mine as and when required in the future.
